

Normal CSS

Episode 10th

- Sass → CSS with some super powers
- SASS → Sassy cascading style sheet.

But they does not scale well with our app

Styled Component → A way of adding CSS

→ Material UI ← react component library
they are pre styled components
→ very popular

or Bootstrap

or Chakra UI

or Ant Design

Tailwind → latest and getting attentions/popularity

tailwindcss.com

Advantages

→ light weight

(include CSS ^{only} that is required)

① Configuration

- tailwindcss.com/docs/installation/frame-work-guides
- Frame work guides
- choose parcel

Install Tailwind CSS with parcel

```
npm install -D tailwindcss postcss  
npm tailwindcss init
```

postcss is tool that
convert/transform
CSS with javascript

New file automatically created
tailwind.config.js

② create a postcssrc file in root folder

③ write content: `["./src/**/*.{html,js,ts,jsx,tsx}"]`

④ write ③ tailwind base,
component,
utilities;

in index.css

⚠ Bug → Some times the extension don't give suggestion use ctrl+space

#writing css for HeaderComponent.

When you not have a class for a hard coded value you can write like this

ex- width

→ w-[200px]

↳ using square brackets

→ ~~shadow~~ ~~header~~
shadow to header
